

# LEACHATE MANAGEMENT

*Part of F&R's Landfill Operational Training Program*

**At F&R** we believe that improving knowledge of landfill operations leads to more obtainable and sustainable short and long-term objectives for your facilities. To that end, we have developed a series of FREE half-day training sessions and discussion events designed to give managers, operators, and industry consultants an opportunity to expand your base of professional knowledge by focusing on improving efficiency and profitability in a variety of areas.

Landfill Leachate is unavoidable in the landfill operational world and can have significant impacts on budgets and the surrounding environment if not properly managed. F&R's Landfill Leachate training Topic #3 will cover every aspect of leachate including generation, tracking, minimizing, predicting, handling and treatment. **At completion of this training event, all attendees should be able to evaluate their site and operations for methods to reduce leachate volumes and to implement better leachate management practices for their facility.**

**Representatives from Pump One, LLC will also be presenting on the subject of Leachate Pumps.**

## Presentation Highlights

- Leachate Management - Why it Matters?
- Leachate Generation.
- Tracking Leachate Quantities
- Predicting Generation Rates
- Reducing Quantities
- Impacts on POTW's
- Leachate Pumps
- Alternative Management Methods

**Session Date:** November 13, 2018  
**Time:** 8 AM - 1 PM - *Lunch will be provided*  
**Location:** F&R Statesville  
1667 Davie Avenue  
Statesville, NC 28677

**Space is limited to eight, please RSVP to reserve your place.**
