

FROEHLING & ROBERTSON

Environmental Services and COVID 19

Let F&R **LOOK**
Before You **LEAP**

F&R's Environmental Services Division is comprised of an interdisciplinary team of engineers, geologists, hydrogeologists, environmental scientists, hydrologists, and industrial hygienists working together to meet your challenges. We are ready and on-call to assist you with **your COVID-19 concerns**. F&R recognizes the challenges you are facing...we are all navigating this uncharted territory together. This pandemic affects each of us as we worry about our family and friends, determine our daily needs and adjust to our new normal. Currently throughout our mid-Atlantic footprint, all of F&R's services are classified as essential and we take great measures to ensure social distancing and safe, hygienic and solitary work practices. As part of our COVID response, we offer specialized services under the direction of a Certified Industrial Hygienist and Certified Safety Professional.

WE'VE GOT YOUR BACK

F&R's COVID and Virus Related Services

- Development of Remediation Protocols 
- Cleanliness Sampling with On-Site Results 
- Coronavirus Sampling via Laboratory Analysis 
- Prevention and Response Training 
- Contractor Oversight and Management 
- Proper Use of PPE Including Respiratory Protection 
- Personnel Decontamination Planning 
- Negative Pressure Testing 

THE F&R DIFFERENCE

Getting the Job Done, Every Day, Every Community

A Single Point of Contact

Rely on your dedicated Client Manager who understands your needs better than anyone else and is committed to ensuring that every report provided to you will meet and/or exceed your expectations.

A Customized Deliverable

What's your preference? To make the decision process more streamlined and efficient, we can provide our easy to read standard report which features the information you need right up front followed by the required historical and current documentation and supporting research organized for quick reference. OR, we can create a custom template that meets your needs.

A Minority Owned Business

ENVIRONMENTAL SERVICES

Assess. Manage. Consult.

ASSESS.

F&R helps clients identify risk via assessment and inspection services in the project planning phase. Early identification prior to project initiation is vital to reduce costly delays later in the process. It also provides additional time to navigate challenging regulatory situations and make plans to address any potential risk issues related to reputation and public scrutiny. Assessment services can be performed on individual properties or linear impact corridors.

ASSESSMENT SERVICES

- Project Analysis Studies
- Asbestos, Lead, Mold and other Hazardous Materials Surveys
- Phase I Environmental Site Assessments (ESA)
- National Environmental Policy Act (NEPA) Assessments
- Wetland Delineations
- Threatened & Endangered Species Assessments
- Archaeological Assessments

MANAGE.

F&R works with Clients to quantify and cope with risks identified during the assessment phase of the project by developing plans to mitigate or manage environmental challenges. Communication with clients, regulators, and stakeholders is the key to successfully developing a project-specific plan and also to ensuring that it is performed as designed. F&R's management services include both operational and technical solutions.

MANAGEMENT SERVICES

- Project Management & Oversight
- Work Plan Development
- Supervisory and Management of Landfill Operations
- Geospatial Services
- Petroleum Storage and Pollution Prevention Plans
- Stormwater and Erosion and Sediment Control Services

CONSULT.

Our consultation services are focused on helping clients avoid, mitigate, and adapt to the risks presented by their operations. Our focus is on understanding your operational needs, business culture, and resulting risk tolerance. We assemble project teams of subject matter experts including industrial hygienists, project managers, trainers, Certified Industrial Hygienists, Professional Geologists, Engineers and Wetlands Scientists to help navigate the challenging regulatory framework associated with new and unexpected environmental obstacles. Our long history of success is based on experienced professionals, established working relationships with regulatory agencies, and a culture that views our clients as partners whose success is as important to us as our own.
